

## Using Filter to View and Export Certain Observations

---

### Mapeo Desktop Filter Data

Within the Observations view of Mapeo desktop, there is the option to **Filter by...** There are **Filter by...** Date of Observation, Category, or various other filter options based on the specific custom Configuration that is installed.

Filter by a specific factor– or multiple factors. The data points displayed on the map and the records in the report will change based on the filters chosen.

These filtered records can also be exported as a GeoJSON.

Click on the three dots in the top right of the screen to open the option to Export Observations.

Choose filtered observations within the drop-down menu.

Click the Save button and give your GeoJSON a name that corresponds to the data being exported.
