

To Remove Data Entries from Mapeo Desktop

Windows

In Windows, the Mapeo folder will be within the AppData folder.

You can view the AppData folder by going into your Users folder then to SpecificUser

In this example, Alissa is the SpecificUser.

`C:\Users\Alissa`

Click on the "View" tab at the top of the page and check the "Hidden Items" checkbox.

Navigate to:

`C:\Users\Alissa\AppData\Roaming\Mapeo`

Within this folder will be the kappa.db folder

The kappa.db folder contains all the log entries that have been added for all of the synched devices.

Deleting or renaming this folder as something other than kappa.db (ex: kappa2.db) will remove the observations within Mapeo Desktop, but will not remove the existing customization within the app.

Mac

Navigate to:

`Macintosh HD/Users/SpecificUser`

In this example, alissastark is the SpecificUser.

To reveal hidden files press the shift key, command key, and the period key at the same time:

`Command + Shift + . (period)`

This will reveal the Library folder.

Navigate to:

`Macintosh HD/Users/alissastark/Library/Application Support/Mapeo`

Rename or delete the kappa.db file (ex: kappa2.db)

After deleting or renaming the kappa.db file, the Mapeo desktop app will have the customizations for observations previously loaded and any custom map tiles. All previous observations will be removed.
