

## **Mapeo Desktop Intro to Edit or Delete Observations**

---

### **Observation Data**

To edit or delete existing Observations within the Observations view, begin by clicking on the point you want to edit.

This will open a popup window with any existing information about your Observation, and dropdown menus for what can be changed within the Observation.

Click on the small downward arrows to open the drop-down menus for your Observation.

Exist information will appear within a greyed area with an “x” in the top right corner. Clicking on the “x” will delete that existing information and you will be able to add new information.

In the top right corner of the popup window there are 3 dots, click on this to open the option to delete the entire Observation.
