

Exporting Observation Data and Creating A Mapeo Webmap

Export Map Data

Within the Observations view, click in the top right corner to open the options for exporting the data.

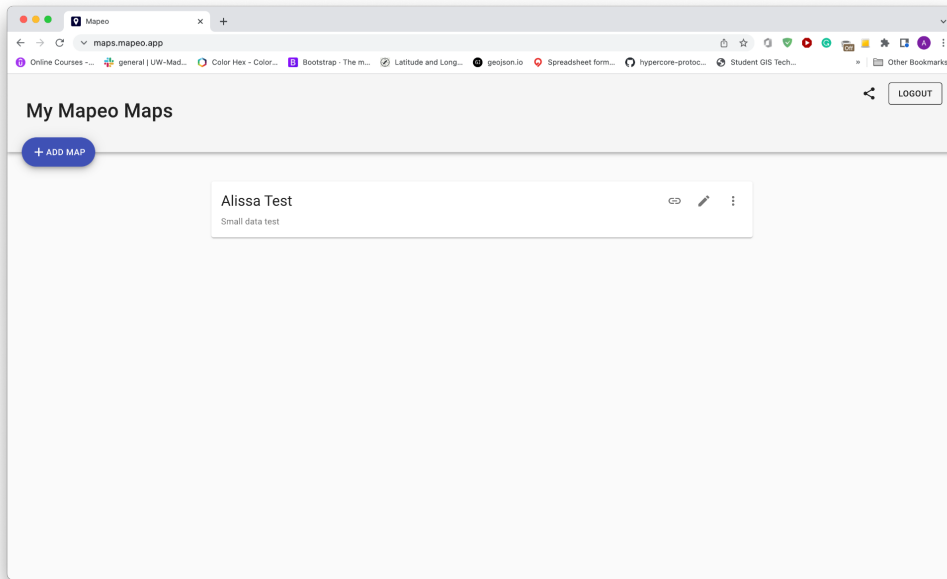

Choose the Webmap option and add a title, a description, and press the Save button.

Save your `.mapeomap` file to a chosen location and name it something that makes sense with the map being exported.

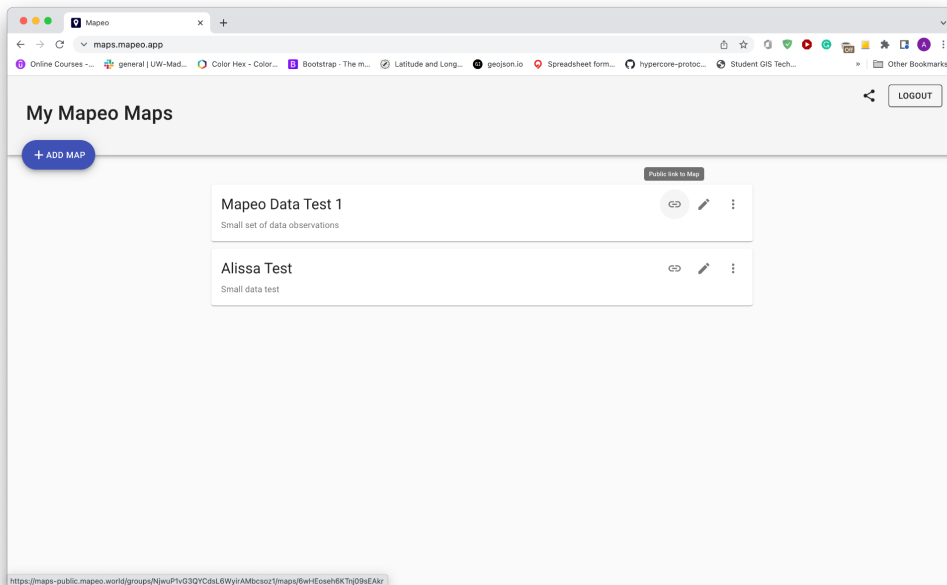

Loading a Mapeo Map Online

First, go to <https://maps.mapeo.app/> and click the add map button.

Navigate to your `.mapeomap` file and click on the open button.

This will add the web map file as a map within My Mapeo Maps.

Click on the link icon to display the public link for this Mapeo web map.

Follow that link and your web map will be displayed and can be shared with others.
