

To Synchronize Mapeo Mobile and Mapeo Desktop

Synch Mobile to Mobile

To **Synchronize** between mobile phones click the synch (lightning bolt)  button on each phone.

A blue screen should open and the names of all the devices available to sync should appear with a lightning bolt.

The name of the device you are currently on is within the dark blue strip with the wifi name.

If there is an issue seeing a device, make sure all devices are on the same wifi network.

Click the Sync button next to the name of a device to share Observations between devices.

All observations from each phone will now be shared and on every phone included in the sync.

The owner of the Observations is the only one able to edit or delete Observations, so all Observations will be seen—but not all can be edited within the mobile app.

Synch Mobile to Desktop

Within Mapeo desktop, click on the Synchronize View.

Within the Mapeo mobile, click on the Synchronize button.

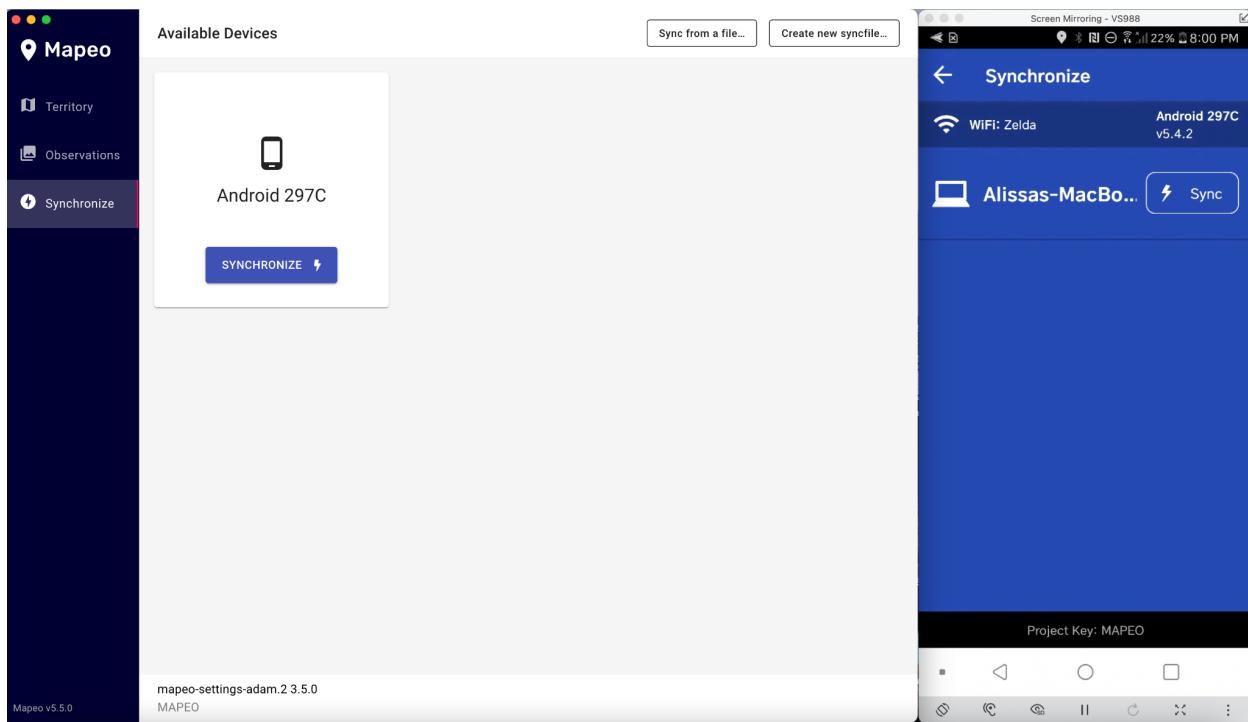

Starting fresh with no database in Mapeo desktop, the sync between the mobile and the desktop will add all Observations from the mobile phones to the desktop. Within Mapeo desktop, all Observations can be created, edited, or deleted.

If there is a database of Observations within Mapeo desktop, all of these Observations will be shared with the mobile device – as well as mobile Observations shared to desktop. Synced devices share all the same Observations.

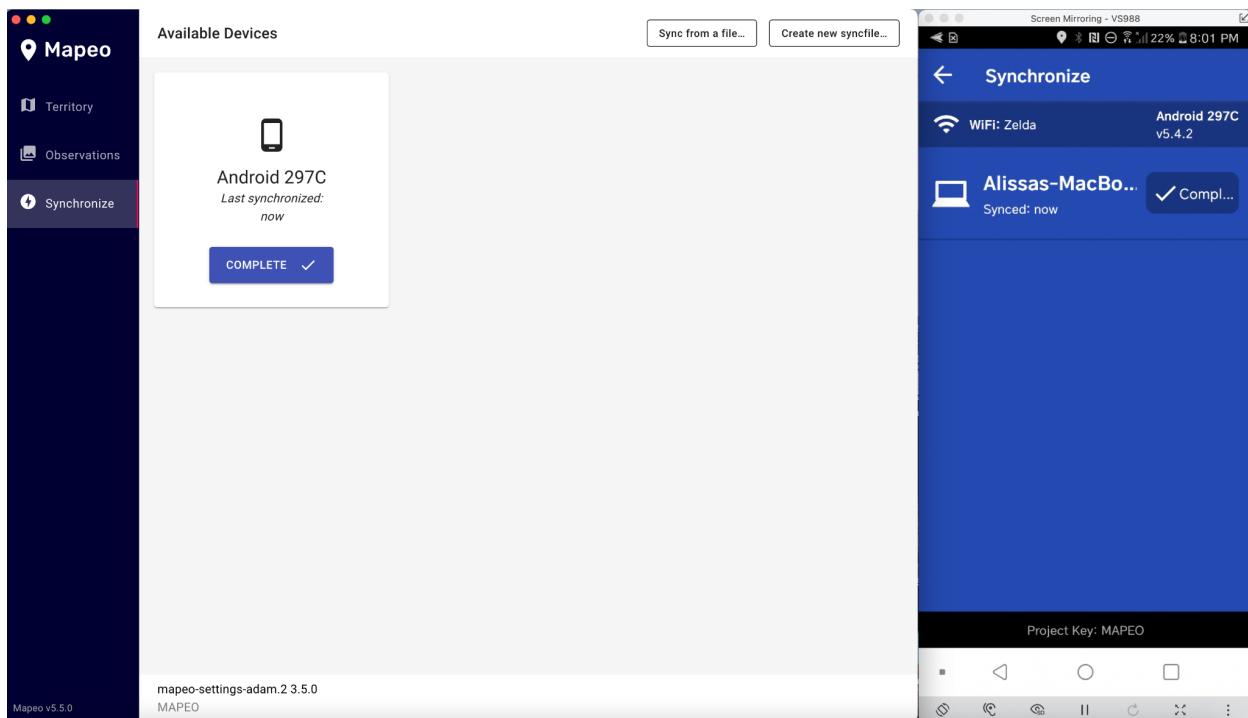

Mapeo desktop showing no Observations and Mapeo mobile with Observations:

A side-by-side comparison of the Mapeo desktop and mobile interfaces. On the left, the desktop application shows a dark interface with a sidebar menu containing 'Territory', 'Observations' (which is highlighted in red), and 'Synchronize'. The main area displays a 'Filter by...' section with dropdown menus for 'Date of observation', 'Category', 'Settlement Type', 'Route Type', and 'Watering Points'. Below this is a message: 'No observations available.' On the right, the mobile application shows a list of observations: 'Building' (1 day ago), 'Route' (1 day ago), and 'Farmland' (1 day ago). Each observation has a small icon next to it: a house for Building, a road for Route, and a field for Farmland. The mobile screen also includes a navigation bar at the bottom with icons for 'Previous', 'Page 1', 'Next', and other controls.
